Art Unit: 3683

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Japanese publication 11-315835.

JP '835 shows a ball-screw of the type claimed except for the specific surface roughness.

It would have been obvious to one of ordinary skill in the art to have finished the surface to 0.12 $\mu$ m or less, or to any other finish, dependent on the desired tolerances.

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Shirai et al., Rowland, Benton et al. and Lindberg show ball screw actuators.

4. Any inquiry concerning this communication should be directed to Mr. Graham at telephone number (703) 308-1113.
